

### **New press box, storage, and locker room**

- Current press box is small, outdated, and extremely hot. This provides an uncomfortable atmosphere for our game day announcer, score board operator, and media staff who broadcast from that space. Due to the space constraints, we are limited to one radio broadcaster in the press box, which was an issue this year when there would be a color commentator or another station that wanted to broadcast from there. There is a need for additional storage space so all the baseball items can be stored near the field instead of spreading out across multiple buildings on the high school campus. The storage area would house the field mower, groomer, chalk, clay, rakes, and other miscellaneous items. A second-level press box would be built into the hillside behind home plate (not taking up any seating area) and provide conditioned space that would house the staff necessary for broadcasting the game. In addition, there would be conditioned second-level locker room space that would provide a changing area for players, storage of uniforms, warm up gear, hats, etc.
  - Total estimated cost for this project is **\$90,000**
